ABSTRAK

Pendahuluan: Dokumentasi Keperawatan merupakan bukti tertulis seorang perawat pada saat melakukan asuhan keperawatan yang digunakan untuk menilai kondisi pasien secara berkelanjutan. Proses dokumentasi keperawatan terdiri dari pengkajian, diagnosa Keperawatan, intervensi, implementasi dan evaluasi yang dilakukan dengan terorganisir secara sistematis dan konsisten. Pendokumentasian keperawatan masih kontroversial dan tidak jelas, terkadang perawat hanya menulis dokumentasi keperawatan secara singkat sehingga tidak tepat karena tidak memenuhi standar dokumentasi keperawatan. Salah satu faktor yang mendorong kinerja perawat dalam mendokumentasikan asuhan keperawatan adalah faktor motivasi.

Tujuan Penelitian: Untuk menganalisis Hubungan Motivasi Perawat Dengan Kualitas Dokumentasi Keperawatan Di Unit Pelayanan Keperawatan Medikal Bedah RS Swasta X Kota Bekasi.

Metode Penelitian: Menggunakan desain penelitian *cross sectional*. Teknik pengambilan sampel dalam penelitian menggunakan teknik *purposive sampling* dengan jumlah sampel penelitian sebanyak 38 perawat.

Hasil: Hasil uji statistik diperoleh nilai signifikansi $p\text{-value} = 0,037$ ($\alpha < 0,05$), dengan koefisien korelasi (r) sebesar 0,338, menunjukkan ada hubungan motivasi perawat dengan kualitas dokumentasi keperawatan di Unit Pelayanan Keperawatan Medikal Bedah RS Swasta X Kota Bekasi dengan kekuatan hubungan lemah.

Kesimpulan: Ada hubungan motivasi perawat dengan kualitas dokumentasi keperawatan di Unit Pelayanan Keperawatan Medikal Bedah RS Swasta X Kota Bekasi.

Kata kunci: Motivasi Perawat, Dokumentasi Keperawatan, Karakteristik Perawat

ABSTRACT

Introduction: Nursing documentation is written evidence of a nurse when carrying out nursing care which is used to assess the patient's condition. The nursing documentation process consists of assessments, nursing diagnoses, interventions, implementation and evaluation which are carried out in an organized, systematic and consistent manner. Nursing documentation is still controversial and unclear, sometimes nurses only write nursing documentation briefly so it is not appropriate because it does not meet nursing documentation standards. One of the factors that drives the performance of nurses in documenting nursing care is the motivational factor.

Objectives: To Analyze the relationship between Nurse Motivation and the Quality of Nursing Documentation in the Medical Surgical Nursing Service Unit X Private Hospital, Bekasi City.

Methods: Using a cross sectional research design. The sampling technique in this study used a purposive sampling technique with a total sample of 38 nurses.

Results: Statistical test results obtained a significance value of $p\text{-value} = 0.037$ ($\alpha < 0.05$), with a correlation coefficient (r) of 0.338, indicating that there is a relationship between nurse motivation and the quality of nursing documentation in the Medical Surgical Nursing Service Unit X Private Hospital, Bekasi City with weak relationship strength.

Conclusion: There is a relationship between nurse motivation and the quality of nursing documentation in the Medical Surgical Nursing Service Unit X Private Hospital, Bekasi City.
