Judul Karya Tulis Ilmiah : Asuhan Keperawatan pada Ny. L dengan *Chronic Kidney Disease (CKD)* di Ruang Bromelia Rumah Sakit Swasta Cikarang di Masa Pandemi *COVID-19*
Halaman : xii + 103 Halaman + 1 tabel + 1 lampiran
Pembimbing : Lisbeth Pardede

ABSTRAK

Latar Belakang : *Chronic Kidney Disease (CKD)* gangguan fungsi renal yang progresif dan *irreversible*, di mana kemampuan tubuh gagal untuk mempertahankan metabolisme dan keseimbangan cairan dan elektrolit. Di Indonesia penyakit *Chronic Kidney Disease (CKD)* meningkat dari 2,0% pada tahun 2013 menjadi 3.8% pada tahun 2018. Berdasarkan data yang didapat dari *medical record* Rumah Sakit di Cikarang dalam satu tahun terakhir periode Januari 2020 sampai April 2021, penyakit *Chronic Kidney Disease (CKD)* ditemukan 337 pasien yang di rawat inap.

Tujuan Umum : Untuk memperoleh pengalaman nyata dalam melakukan asuhan keperawatan pada pasien *Chronic Kidney Disease (CKD)* melalui pendekatan proses keperawatan secara komprehensif.

Metode Penulisan : Penulis menggunakan metode deskriptif yang diperoleh dengan cara pemeriksaan, rekam medis pasien, dan informasi dari perawat ruangan.

Hasil : Hasil dari pengkajian didapatkan 5 diagnosa keperawatan. Diagnosa keperawatan prioritas yaitu penurunan curah jantung berhubungan dengan ketidakseimbangan cairan mempengaruhi volume sirkulasi, Intervensi keperawatan yang dilakukan adalah monitor bunyi jantung dan paru. monitor pengisian kapiler, monitor tanda-tanda vital (TD, nadi,RR), monitor status MAP, Berikan posisi nyaman dengan posisi semi-fowler, kolaborasi dengan tim medis dalam pemberian terapi obat dan terapi diet pada pasien dengan *Chronic Kidney Disease (CKD)*.

Kesimpulan dan Saran : Asuhan keperawatan pada pasien dengan *Chronic Kidney Disease (CKD)* perlu memperhatikan masalah keperawatan yaitu penurunan curah jantung agar tidak terjadi komplikasi. Diharapkan perawat dapat mengedepankan penerapan tindakan keperawatan mandiri yang sesuai dengan teori.

Keyword : Asuhan Keperawatan, *Chronic Kidney Disease (CKD)*.

ABSTRACK

Background : Chronic Kidney Disease (CKD) is a progressive and irreversible renal function disorder, in which the body's ability to fail to maintain metabolism, fluid, and electrolyte balance. In indonesia, Chronic Kidney Disease (CKD) increased from 2.0% in 2013 to 3.8% in 2018. Based on data obtained from the medical records of Hospitals in Cikarang in the one year period from January 2020 to April 2021, Chronic Kidney Disease (CKD) found 337 patients who were hospitalized.

General purpose: To gain real experience of performing nursing care for Chronic Kidney Disease (CKD) patiens, a compherensive nursing process approach.

Writting method: The author uses a descriptive method obtained by examination, patient medical records, and information from the room nurse.

Result : The results of the study obtained 5 diagnoses nursing. Priority nursing diagnosis is a decreased in cardiac output related to fluid imbalance affecting circulation volume, nursing interventions carried out are heart and lung sound monitors, monitor capillary refill, monitor vital signs, monitor mean arterial pressure status, provide a comfortable position in a semi – fowler position, collaborate with the medical team in administering drug therapy and diet therapy in patients with Chronic Kidney Disease (CKD) .

Conclusions and Suggestions : Nursing care for patients with ChronicKidney Disease (CKD) needs to pay attention to nursing problems, namely a decrease in cardiac output so that complications do not occur. It is expected that nurse can prioritize the application of independent nursing actions in accordance with theory.
